PROFILE

I'm a motivated Computer Engineering student with a keen interest in utilizing my knowledge in web and mobile app development, as well as DevOps. My goal is to contribute my technical abilities and creative problem-solving to exciting projects, while also growing within a collaborative and progressive team environment. I am currently pursuing a B.Sc.Eng. in Computer Engineering at the University of Ruhuna, currently in my third year of undergraduate studies.

PROJECTS

Otto Car sale and Rental service

I led a team of four in developing a user-friendly React.js web application with Redux for state management, focusing on Otto Car Sale. As project manager, I managed client interactions and oversaw changes throughout the five-sprint project. Additionally, I collaborated on UX/UI design and handled most front-end development tasks. Leveraging axios for API calls and local storage for sessions, we ensured seamless communication with the backend. Employing CSS for responsive design, we structured the application with reusable components, adhering to best practices. We utilized Jira for managing our workflow, ensuring efficient task allocation and progress tracking. Regular evaluations by faculty Dr.s confirmed our adherence to high standards of modern web development.

Student Management System

Student Manager is a desktop application developed using WPF and structured with MVVM architecture, offering efficient management of student records. It facilitates the seamless addition, editing, and deletion of student details for enhanced usability.

SKILLS

- Java, JavaScript, C++, C
- Python
- HTML , CSS
- AWS, Git, Docker,
- React, Redux
- Express
- NodeJS
- MySQL, MongoDB
- Flutter, Dart
- Agile Methodology
- Linux Ubuntu

Find Cameraman

We developed a mobile application aimed at assisting cameramen and users in efficiently managing their work. The app simplifies the process of finding a suitable cameraman for various event needs. Using Flutter and Firebase, my role in this two-member project was to design the UI and develop the frontend of the mobile application.

PlacePilot

I created a web application using React.js to assist users in locating nearby stores and accessing relevant information. Inspired by a Google Maps article, I embarked on this project out of personal interest. From gathering requirements to deployment, I extensively researched and gained valuable insights. Integrating web scraping technology enabled us to gather accurate and current store details from online maps and directories. Features such as search functionality, pagination, and error handling were implemented to ensure a smooth user experience. Using HTML, CSS, JavaScript, and React.js, I developed the frontend, employing web scraping techniques for data acquisition from map services.

DevOps Project

We are currently engaged in a group project focused on DevOps, which is part of our semester 6 curriculum. This project is ongoing and actively being developed by our team.

EXTRACURRICULAR ACTIVITIES

- Photographer of faculty media unit
  REF Media
- Member of Weightlifting team

ACHIEVEMENTS

HaXtream 2.0 - 2023

7th place for team 1st Lane

CERTIFICATES

DP Education Web Development

SOFT SKILLS

- TeamWork
- Time Management
- Ability to adapt and fast learner
- Critical Thinking

EDUCATION

O/L & A/L - Govt : Science College Matale.

B.Sc.Hons. in Computer Engineering (UG) - Faculty of Engineering University of Ruhuna
[Current GPA : 2.99]
