PROFILE

I'm a motivated Computer Engineering student with a keen interest in utilizing my knowledge in web and mobile app development, as well as DevOps. I am really interested in DevOps engineering and I need to continue my career in DevOps. My goal is to contribute my technical abilities and creative problem-solving to exciting projects, while also growing within a collaborative and progressive team environment. I am currently pursuing a B.Sc.Eng. in Computer Engineering at the University of Ruhuna, currently in my third year of undergraduate studies.

PROJECTS

Otto Car sale and Rental service (Group project , Academic)

I led a team of four in developing a user-friendly React.js web application with Redux for state management, focusing on Otto Car Sale. As project manager, I managed client interactions and oversaw changes throughout the five-sprint project. Additionally, I collaborated on UX/UI design and handled most front-end development tasks. Leveraging axios for API calls and local storage for sessions, we ensured seamless communication with the backend. Employing CSS for responsive design, we structured the application with reusable components, adhering to best practices. We utilized Jira for managing our workflow, ensuring efficient task allocation and progress tracking. Regular evaluations by faculty Dr.s confirmed our adherence to high standards of modern web development.

Find Cameraman (Group project , Academic)

We developed a mobile application aimed at assisting cameramen and users in efficiently managing their work. The app simplifies the process of finding a suitable cameraman for various event needs. Using Flutter and Firebase, my role in this two-member project was to design the UI and develop the frontend of the mobile application..

MediMate (Individual project)

Currently contributing to the ongoing development of Medimate, a user-friendly application aimed at simplifying personal health management. Involved in implementing features such as secure medical record storage, medication reminders, and symptom tracking to continuously enhance user experience and promote improved health outcomes.

TECHNICAL SKILLS

- Java, JavaScript, C++, C
- Python
- HTML , CSS
- AWS, Git, Docker,
- React, Redux
- Express
- NodeJS
- MySQL, MongoDB
- Flutter, Dart
- Agile Methodology
- Linux Ubuntu

SOFT SKILLS

- TeamWork
- Leadership
- Time Management
- Ability to adapt and fast learner
- Critical Thinking

PlacePilot (Individual project)

I created a web application using React.js, and I utilized Puppeteer technology to assist users in locating nearby stores and accessing relevant information. Inspired by a Google Maps article, I embarked on this project out of personal interest. From gathering requirements to deployment, I extensively researched and gained valuable insights. Integrating web scraping technology enabled us to gather accurate and current store details from online maps and directories. Features such as search functionality, pagination, and error handling were implemented to ensure a smooth user experience. Using HTML, CSS, JavaScript, and React.js, I developed the frontend, employing web scraping techniques for data acquisition from map services.

Student Management System

Student Manager is a desktop application developed using WPF and structured with MVVM architecture, offering efficient management of student records. It facilitates the seamless addition, editing, and deletion of student details for enhanced usability.

Pipeline for a backend using Node.js (Individual project)

I Created a system with GitHub, Jenkins, and Docker to automate building and deploying a Node.js backend app. It kicks off whenever there's an update on GitHub, makes a Docker image, and sends it to Docker Hub. Now working on making it even better with ansible.

DevOps Project (Group project , Academic)

We are currently engaged in a group project focused on DevOps, which is part of our semester 6 curriculum. This project is ongoing and actively being developed by our team. In this project, we need to develop a CI/CD pipeline and automate procedures for the Otto Car Sale web project.

EXTRACURRICULAR ACTIVITIES

- Photographer of faculty media unit
  REF Media
- Member of Weightlifting team

ACHIEVEMENTS

HaXtream 2.0 - 2023
7th place for team 1st Lane

CTF 1.0 - 2024
5th place for team BitBusters

CERTIFICATES

DP Education - Web Development

HackerRank - Java

HackerRank - Problem Solving

EDUCATION

O/L & A/L - Govt : Science College Matale.

B.Sc.Hons. in Computer Engineering (UG) - Faculty of Engineering University of Ruhuna
[Current GPA : 2.97]
